TECHNICAL CHARACTERISTICS

- 4" multi-stage submersible solar pumps
- High performance motor with permanent magnets
- High efficiency photovoltaic panels PANASONIC mod. VBHN240SJ25
- Electronic control incorporated in the motor

INSTALLATION AND USE

The FLUID SOLAR pumps have been developed to pump clean water from a well utilising energy obtained from photovoltaic panels. The electronic control incorporated into the high performance motor converts the exit voltage from the panels and regulates the velocity of rotation of the motor in order to utilise the available energy most efficiently at any one time: on a sunny day there will be a high velocity of rotation with a raised performance of the pump, and on a cloudy day the velocity and the performance will be reduced.

PATENTS - TRADE MARKS

Installation examples for electric water pump as P1=750 W

FLUID SOLAR 1/10 - 2/6 - 4/4 - 6/3

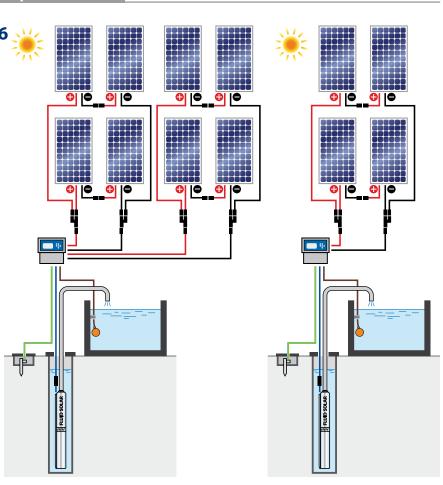

- To get the nominal maximum performances waterpump has to be powered by n. 4 photovoltaic modules with a nominal total power of 980 Wp at least.
- Waterpump can be powered even by only 2 photovoltaic modules: in this case performances are lower than maximum nominal performances that can be achieved with 4 modules.
- Empty tension for any single module has to range between **35** to **50 V**DC.

Installation examples for electric water pump as P1=1500 W

FLUID SOLAR 1/20 - 2/14 - 4/8 - 6/6

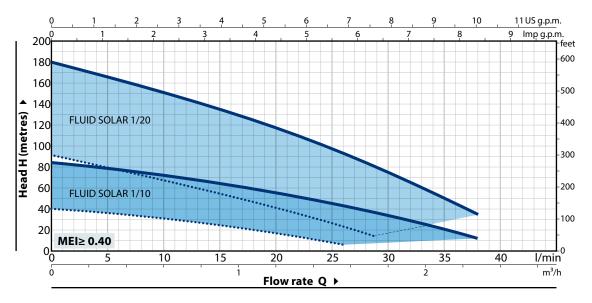

- To get the nominal maximum performances waterpump has to be powered by n. 8 photovoltaic modules with a nominal total power of 1960 Wp at least.
- Waterpump can be powered even by only 4 photovoltaic modules: in this case performances are lower than maximum nominal performances that can be achieved with 8 modules.
- Empty tension for any single module has to range between 35 to 50 Vpc.
